

If you want to type Hindi ligatures,
you have to select **Hi** (Hindi) on the taskbar.
After having chosen “ShiDeva” or any other OpenType Hindi Font
you then may type every ligature - supposed supported in the Font.

Examples

To get the ligature न्द

you'll type

न ् द and you'll get as result न्द

To get the ligature ष्ट

you'll type

ष ट र and you'll get as result ष्ट

Have a look at my lycos homepage's Hindi site
